Make everything on your computer faster

Memory is a component in your computer that allows for short-term data access. Since your system's moment-to-moment operations rely on short-term data access – loading applications, browsing the Web or editing a spreadsheet – the speed and amount of memory in your system plays a critical role. Load apps in seconds by increasing the speed of your memory and installing more of it.

Multitask with ease

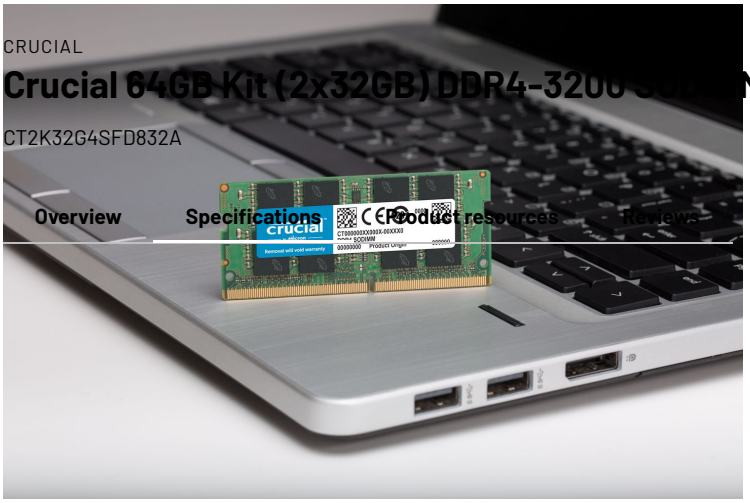

If you're like us, you use your computer to do a lot of things at once. You might be editing a document, while also looking at pictures and browsing the internet. This naturally leads to a performance problem: every app you're running requires memory and competes for a limited pool of resources. Overcome this by installing high-density modules in each memory slot for seamless multitasking.

Install with ease – no computer skills required

With just a screwdriver, your owner's manual, and a few minutes of time, you can install memory – no computer skills necessary. Just watch one of our three-minute install videos, and we'll walk you step-by-step through the process. Don't pay a computer shop to do something you can do in minutes!

It's RAM

I purchased these to quadruple the RAM on my work computer. Unfortunately it made zero difference. There is so much security embedded into it, the simple task of opening my Documents folder takes some time! However, install was easy(had to go in upside down). There were no boot issues, and my system...

Don't trust the Crucial memory program

Needed to upgrade from 8 to 64g to run virtual desktops for training purposes on my laptop. Couldn't reach any Customer Service reps so just gave up and forgot to try again. Trying to work this out with just 32g upgrade.

5 **Works as it should**

Given that Micron makes the chips for a lot of the RAM cards out there, I don't know how it compares to my old RAM in terms of speed (I haven't noticed a difference), which also seems to be made by Micron. However, the upgrade from 16GB to 64GB was amazing and I loved it. I can finally run my games with other apps open and not run out of RAM. Seeing as my computer is only rated for 32GB max, I was surprised when Crucial said that it could run 64GB. After doing some research and hearing others' success, I tried it for myself and it worked! Crucial really did their testing, I guess.

5 **All around ease of use.**

Used the scanner to determine with type and current amount of ram installed. Dell manu said 32gb was the max while crucial said 64gb would work. They guarantee the upgrade will work. Installed and worked

4 **It's RAM**

I purchased these to quadruple the RAM on my work computer. Unfortunately it made zero difference. There is so much security embedded into it, the simple task of opening my Documents folder takes some time! However, install was easy(had to go in upside down). There were no boot issues, and my system recognized the increase in RAM. Adding RAM is typically a no brainer, but for my Government laptop, there's no helping it. I also recently added RAM and a SSD to my 2010 MacBook Pro and they absolutely lit a fire to the speeds!!! Again, adding RAM and upgrading to a faster SSD will always yield positive results. Just buy them.
